

Fire Debris to be removed from 3570 Fruitland Ave. in October

Fruitland Magnesium Fire Incident | October 12, 2016

Debris to be removed by EPA at 3570 Fruitland Avenue

Cleaning Up Fire Debris

The U.S. Environmental Protection Agency (EPA) will be removing materials from 3570 Fruitland Avenue that remain from the June 14, 2016 fire. Debris from the fire may contain hazardous materials and will be removed to reduce any potential health risks to the community. Following the fire, the debris at the facility has been stabilized to prevent any ash and dust from impacting the community. As the cleanup activities continue, every effort will be made to ensure that dust and ash do not re-enter your neighborhood.

During debris removal, you may notice burned metal and other odors, depending on weather conditions. **These odors can be a nuisance, but do not pose a human health risk.** EPA will be conducting air monitoring throughout the cleanup and will take measures to control any dust. This testing and any subsequent action will ensure there are no adverse health impacts to the community during the work.

What You Will See

As part of the cleanup, EPA will be bringing in heavy machinery and vehicles to move and dispose of debris from the fire. On the property and in the street in front of 3570 Fruitland Avenue, you will likely see:

- EPA contractors gathering material for disposal
